The IMC Non-US Small Cap strategy returned -6.49% (net of fees) in Q4, outperforming its benchmark, the MSCI ACWI ex-US Small Cap Index, by 117 basis points. For the year, the strategy gained 3.64% (net of fees), outperforming its benchmark by 28 basis points. Informed Momentum (momentum exposure & stock selection) drove outperformance for the quarter and year as momentum has been the best performing style factor in global equity markets.

MARKET ENVIRONMENT

Non-US equities pulled back in Q4, denting returns for the year

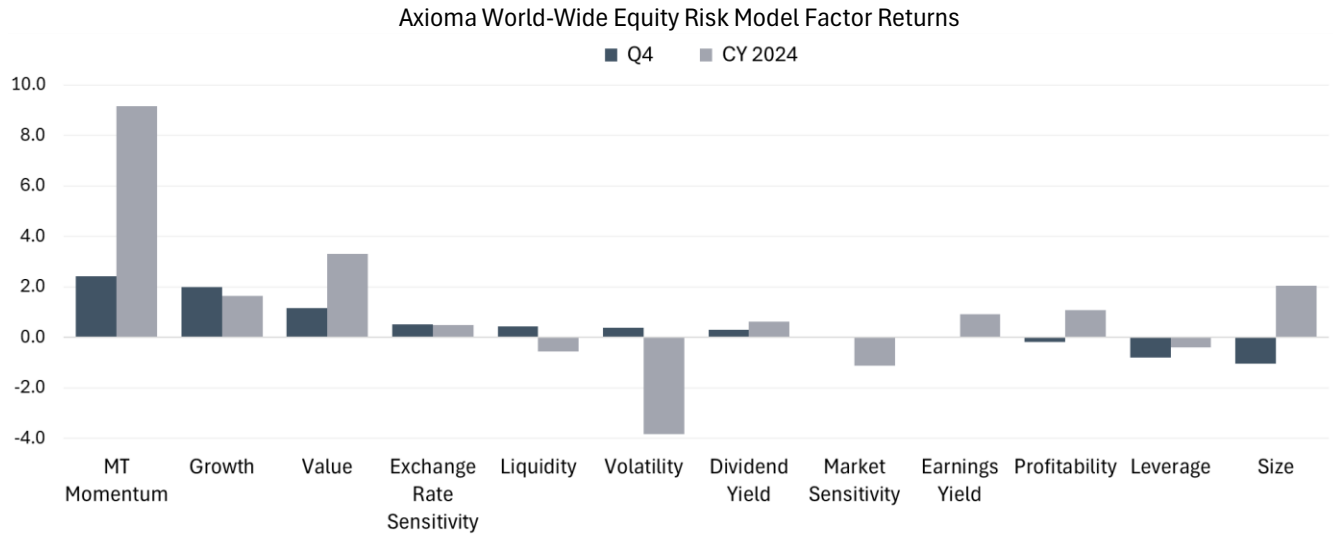

- Fears of recession rattled European markets in the quarter amid weaker-than expected economic growth and political instability in France and Germany.
- Donald Trump’s victory in the US presidential election weighed on emerging markets in the quarter, given proposed trade tariffs and a stronger US dollar.
- Korea and Brazil were among the weakest markets in the quarter, while Taiwan was buoyed by ongoing optimism around artificial intelligence.

All size segments fell in Q4, giving back some of this year’s previously strong gains. The MSCI ACWI ex-US Small Cap Index ended the quarter down 7.66%, about on-par with its large cap counterpart which fell 7.64%. For the year, small cap ended up 3.36%, failing to keep pace with the MSCI ACWI ex-US Large Cap index which gained 6.03%.

Momentum was the best performing factor in global equity markets in Q4 and 2024

After a soft third quarter, momentum resumed leadership in Q4 according to Axioma’s global equity risk model. Interestingly, growth and value were the next two best performers in the quarter, while size and leverage lagged. For the year, momentum was the standout performer, followed by value and size. On the downside, volatility and market sensitivity (beta) underperformed.

In small cap, there was nowhere to hide in Q4

It was a broad sell-off in the MSCI ACWI ex-US Small Cap Index in Q4. Higher momentum stocks held in best in the downturn but not as well as in large cap. Within the small cap index, stocks with the lowest momentum, highest beta and lowest ROE sold off most, while non-earners, high ROE and high momentum stocks outperformed. Momentum in China and Australia worked particularly well in the period.

Q4 2024 Performance Drivers within the MSCI ACWI ex-US Small Cap Index

Canada and China held in best in Q4; India was the standout performer for the year

In the MSCI ACWI ex-US Small Cap Index, Canada was a relative outperformer as the central bank made sizable interest rate cuts to support economic growth. Despite a potential increase in tariffs from the US, China also outperformed in the quarter on hopes for policy stimulus measures announced in September, aimed at reversing its economic slowdown. On the downside, Europe was down over 10%, significantly detracting in the quarter amid weaker-than expected economic growth and political instability in France and Germany. Brazil was down over 23% in Q4 as the local currency fell amid rising concerns over the country's fiscal outlook. Korea also suffered significant losses in the quarter as first the president, then the acting president were impeached.

Financials outperformed, while real estate and materials lagged

At the sector level, financials, technology and energy held in best in non-US small cap in Q4, while real estate, materials and utilities all posted double-digit losses. For the year, financials made the strongest gains, up over 18%, while real estate and materials were firmly in the red.

Q4 2024 ATTRIBUTION

Informed Momentum contributed most to outperformance

The IMC Non-US Small Cap strategy returned -6.49% (net of fees) in Q4, outperforming the MSCI ACWI ex-US Small Cap Index by 117 basis points.

- Risk attribution shows Informed Momentum (momentum exposure & stock selection) drove outperformance as momentum was the best performing style factor in Q4. Exposure to growth and relative industry positioning (underweight to real estate and materials) was also additive.
- Relative country positioning had a negative effect (overweight to India and underweight to Japan), while underexposure to value and dividend yield further detracted in the quarter.
- Performance attribution by country shows outperformance was driven by positive stock selection, particularly in China, Australia and Canada. This was partially offset by negative allocation effects due mostly to overweight positioning to Korea, Australia and Brazil.

CALENDAR YEAR 2024 ATTRIBUTION

Contributions from Informed Momentum were offset by other factor headwinds

The IMC Non-US Small Cap strategy returned 3.64% (net of fees) in calendar year 2024, outperforming the MSCI ACWI ex-US Small Cap Index by 28 basis points.

- Risk attribution shows Informed Momentum (momentum exposure & stock selection) was the most significant contributor to outperformance in the period, while exposure to growth and size was further additive.
- Relative country positioning had a negative effect (overweight to Korea and underweight to Japan), as did underexposure to value and exposure to volatility.
- Performance attribution by country shows positive stock selection was offset by negative country allocation effects. Holdings in Korea, Brazil and Germany contributed most, while stock selection in India and Taiwan detracted. The portfolio's overweight to Korea was the largest detractor from an allocation perspective.

All periods greater than one year are annualized. Please see the "Important Disclosures" page for detailed performance disclosures. Inception dates are as follows: Global Small Cap - July 1, 2017; Global Micro Cap - February 1, 2018; Global Equity - January 1, 2024.

Effective 2/4/2025, the EAM Global Opportunities strategy and EAM Global Discovery strategy changed their names to IMC Global Small Cap and IMC Global Micro Cap, respectively. This name change aligns with the firm's rebranding from EAM Investors to the Informed Momentum Company (IMC) and more accurately reflects the strategy's investment focus. Please note, the investment approach, objectives, and the team managing the strategy remain unchanged.

*Model strategies are paper-traded daily and maintained and calculated using the Factset Research System. The system calculates hypothetical performance based on end of day pricing. Transactions were not executed, and no actual investments were made within the model portfolio. The performance figures do not reflect the results of actual trading or the cost of taxes, brokerage, management fees or other expenses or taxes applicable to a typical investor. Model returns include an allocation to cash and the hypothetical receipt of dividends.

¹Global Micro Cap benchmark is comprised of the Russell Global Micro Cap index from inception thru 12/31/2018, thereafter returns are for the FTSE Global Micro Cap Index.

Important Disclosures

Past performance does not ensure future results, and there is no assurance that the portfolios will achieve their investment objectives.

Gross and net composite returns are presented net of brokerage commissions and include income from interest and dividends as well as capital gains less applicable withholdings. The returns do not reflect the deduction of other taxes a typical investor may accrue or custodial fees. The U.S Dollar is the currency used to express performance. All periods greater than one year are annualized.

As of February 4th, 2025, EAM Investors, LLC, "EAM" has officially changed its name to the Informed Momentum Company, "IMC". This name change does not impact the integrity or content of the research, reports, or any materials previously published under the old name. All references to "EAM" in past publications and reports now refer to "IMC".

IMC US Small Cap

The inception date for the IMC US Small Cap composite is October 2, 2007. Net returns are net of the maximum annual management fee of 0.50%. The Russell 2000 Index consists of the smallest 2,000 securities in the Russell 3000 Index, representing approximately 10% of the Russell 3000 total market capitalization. The Russell 2000 Value Index (R2KVI) measures the performance of those Russell 2000 companies with relatively lower price-to-book ratios and lower forecasted growth values. The Russell 2000 Index and the Russell 2000 Value Index are being presented for informational purposes only. The Russell 2000 Growth Index (R2KGI) measures the performance of those Russell 2000 companies with higher price-to-book ratios and higher forecasted growth values. The Russell 2000 Growth Index has been chosen as a benchmark to the IMC US Small Cap Growth composite because the Advisor believes that it is the most appropriate broad-based securities index to be used for comparative purposes given the investment growth-oriented strategy of the portfolio.

IMC US Micro Cap

The inception date for the IMC US Micro Cap composite is October 2, 2007. Net returns are net of the maximum annual management fee of 0.50%. The Russell Microcap Index consists of the smallest 1,000 companies in the small-cap Russell 2000 Index plus the next 1,000 securities. The Russell Microcap Value Index measures the performance of those Russell Microcap companies with lower price-to-book ratios and lower forecasted growth values. The Russell Microcap Index and the Russell Microcap Value Index are being presented for informational purposes only. The Russell Microcap Growth Index (RMGI) measures the performance of those Russell Microcap companies with higher price-to-book ratios and higher forecasted growth values. The Russell Microcap Growth Index has been chosen as a benchmark to the IMC US Micro Cap composite because the Advisor believes that it is the most appropriate broad-based securities index to be used for comparative purposes given the investment growth-oriented strategy of the portfolio.

IMC US Ultra Micro Cap

The inception date for the IMC US Ultra Micro Cap composite is October 2, 2007. Net returns are net of the maximum annual management fee of 0.50%. The Russell Microcap Index consists of the smallest 1,000 companies in the small-cap Russell 2000 Index plus the next 1,000 securities. The Russell Microcap Value Index measures the performance of those Russell Microcap companies with lower price-to-book ratios and lower forecasted growth values. The Russell Microcap Index and the Russell Microcap Value Index are being presented for informational purposes only. The Russell Microcap Growth Index (RMGI) measures the performance of those Russell Microcap companies with higher price-to-book ratios and higher forecasted growth values. The Russell Microcap Growth Index has been chosen as a benchmark to the IMC US Ultra Micro Cap composite because the Advisor believes that it is the most appropriate broad-based securities index to be used for comparative purposes given the investment growth-oriented strategy of the portfolio.

IMC US Mid Cap

The inception date for the IMC US Mid Cap representative account is April 1, 2019. Net returns are net of the maximum annual management fee of 0.35%. The Russell Mid-Cap Index is a subset of the Russell 1000 Index and is designed to measure the performance of the mid-cap segment of the US equity universe. It includes approximately 800 of the smallest securities based on a combination of their market cap and current index membership. The Russell Mid-Cap Growth Index measures the performance of those Russell mid-cap companies with higher price-to-book ratios and higher I/B/E/S forecasted medium term (2 year) growth and higher sales per share historical growth (5 year). The Russell Mid-Cap Value Index measures the performance of those Russell Mid-Cap companies with lower price-to-book ratios, lower I/B/E/S forecast medium term (2 year) growth and lower sales per share historical growth (5 years). The Russell Mid-Cap Growth Index has been chosen as a benchmark to the IMC Mid Cap representative account because the Advisor believes that it is the most appropriate broad-based securities index to be used for a comparative purposes given the investment strategy of the portfolio. This strategy is currently funded by seed capital. Its performance may be impacted by a limited capital base, which can result in higher volatility and potential deviations from future performance as additional capital is deployed. The strategy's risk/return profile may evolve over time as it grows and the capital base increases.

IMC US Large Cap

The inception date for the IMC US Large Cap representative account is March 1, 2022. Net returns are net of the maximum annual management fee of 0.20%. The Russell 1000 Index measures the performance of the large cap segment of the US equity universe and is designed to represent approximately 1,000 of the largest securities based on a combination of their market cap and current index membership. The Russell 1000 Index has been chosen as a benchmark to the IMC US Large Cap portfolio because the Advisor believes that it is the most appropriate broad-based securities index to be used for comparative purposes given the investment strategy of the portfolio. The Russell 1000 Growth Index measures the performance of those Russell 1000 companies with higher price-to-book ratios and higher forecasted growth values. The Russell 1000 Value Index measures the performance of those Russell 1000 companies with lower price-to-book ratios and lower forecasted growth values. The Russell 1000 Growth Index and the Russell 1000 Value Index are being presented for informational purposes only. This strategy is currently funded by seed capital. Its performance may be impacted by a limited capital base, which can result in higher volatility and potential deviations from future performance as additional capital is deployed. The strategy's risk/return profile may evolve over time as it grows and the capital base increases.

IMC Non-US Small Cap

The inception date for the IMC Non-US Small Cap composite is May 1, 2011. Net returns are net of the maximum annual management fee of 0.50%. The MSCI ACWI ex-US Small Cap Index captures small cap representation across 22 of 23 Developed Markets (DM) countries (excluding the US) and 25 Emerging Markets (EM) countries. The index is designed to measure small cap equity market performance in the global developed and emerging markets excluding the United States. The MSCI ACWI ex-US Small Cap Index has been chosen as a benchmark to the IMC Non-US Small Cap strategy because the Advisor believes that it is the most appropriate broad-based securities index available to be used for comparative purposes given the investment strategy of the portfolios. The MSCI ACWI ex-US Small Cap Growth Index captures small cap securities exhibiting overall growth style characteristics across 22 of 23 DM countries (excluding the US) and 25 EM countries. The MSCI ACWI Small Cap Value Index captures small cap securities exhibiting overall value style characteristics across 23 DM countries and 25 EM countries. The MSCI ACWI ex-US Small Cap Growth Index and the MSCI ACWI ex-US Small Cap Value Index are being presented for informational purposes only.

IMC Non-US Micro Cap

The inception date for the IMC Non-US Micro Cap composite is June 1, 2014. Net returns are net of the maximum annual management fee of 0.50%. The Linked Global ex-US Micro Cap Index represents the linked index returns of the Russell Global ex-US Micro Cap Index from June 1, 2014 through December 31, 2018 and the index returns of the FTSE Global ex-US Micro Cap Index effective January 1, 2019 and thereafter. The Russell Global ex-US Micro Cap Index was no longer supported effective December 31, 2018 and the FTSE Global ex-US Micro Cap Index is initiated effective January 1, 2019. The Adviser has linked the returns of these two indexes for comparison purposes because it believes that the linked return stream is the most appropriate broad-based securities indexing available to be used for comparative purposes given the investment strategy of the IMC Non-US Micro Cap Composite. The FTSE Global ex-US Micro Cap Index is a market-capitalization weighted index representing the performance of Micro cap stocks in Developed and Emerging markets (excluding the US). The FTSE Global ex-US Micro Cap index is constructed to represent the Micro-cap segment of the global equity market, excluding companies assigned to the United States.

IMC Non-US Equity Model

The IMC Non-US Equity Model is a portfolio that is paper-traded daily and maintained and calculated using the Factset Research System. The system calculates hypothetical performance based on end of day pricing. Transactions were not executed, and no actual investments were made within the model portfolio. The performance figures do not reflect the results of actual trading or the cost of taxes, brokerage, management fees or other expenses or taxes applicable to a typical investor. Model returns include an allocation to cash and the hypothetical receipt of dividends. Net returns reflect the deduction of the maximum annual management fee of 0.35% before custody charges, withholding taxes and other indirect expenses. Inception-To-Date returns for the IMC Non-US Equity Model portfolio are from the period beginning November 1, 2024.

The MSCI ACWI ex-US Index captures large and mid cap representation across 22 or 23 Developed Markets (DM) countries (excluding the United States) and 24 Emerging Markets (EM) countries. The index is designed to measure equity market performance in the global developed (excluding the US) and emerging markets. The MSCI ACWI ex-US Index has been chosen as a benchmark for the IMC Non-US Equity Model because the Advisor believes that it is the most appropriate broad-based securities index available to be used for comparative purposes given the investment strategy of the portfolio. The MSCI ACWI ex-US Growth Index captures securities exhibiting overall growth style characteristics across 22 DM countries (excluding the US) and 24 EM countries. The MSCI ACWI ex-US Value Index captures securities exhibiting overall value style characteristics across 22 DM countries (excluding the US) and 24 EM countries. The MSCI ACWI ex-US Value Index and the MSCI ACWI ex-US Growth Index are being presented for informational purposes only.

IMC Emerging Markets Small Cap

The inception date for the IMC Emerging Markets Small Cap composite is April 1, 2012. Net returns are net of the maximum annual management fee of 0.50%. The MSCI Emerging Markets Small Cap Index includes small cap representation across 25 Emerging Markets countries (EM) and is designed to measure small cap equity market performance in the global emerging markets. The MSCI Emerging Markets Small Cap Index has been chosen as a benchmark to the IMC Emerging Markets Small Cap strategy because the Advisor believes that it is the most appropriate broad-based securities index available to be used for comparative purposes given the investment strategy of the portfolios. The MSCI Emerging Markets Small Cap Growth Index captures small cap securities exhibiting overall growth style characteristics across 25 EM countries. The MSCI Emerging Markets Value Index captures small cap securities exhibiting value style characteristics across 25 EM countries. The MSCI Emerging Markets Small Cap Growth Index and the MSCI Emerging Markets Small Cap Value Index are being presented for informational purposes only.

IMC Emerging Markets Equity Model

The IMC Emerging Markets (EM) Equity Model is a model portfolio that is paper-traded daily and maintained and calculated using the Factset Research System. The system calculates hypothetical performance based on end of day pricing. Transactions were not executed, and no actual investments were made within the model portfolio. The performance figures do not reflect the results of actual trading or the cost of taxes, brokerage, management fees or other expenses or taxes applicable to a typical investor. Model returns include an allocation to cash and the hypothetical receipt of dividends. Net returns reflect the deduction of the maximum annual management fee of 0.35% before custody charges, withholding taxes and other indirect expenses. Inception-To-Date returns for the IMC EM Equity Model portfolio are from the period beginning February 1, 2023.

The MSCI Emerging Markets (EM) Index captures large and mid cap equity securities across 24 Emerging Market countries and captures approximately 85% of the free float-adjusted market capitalization of each country. The MSCI EM Index has been chosen as a benchmark for the IMC EM Equity Model because the Advisor believes that it is the most appropriate broad-based securities index available to be used for comparative purposes given the investment strategy of the portfolio. The MSCI EM Growth Index captures securities exhibiting overall growth style characteristics across 24 EM countries. The MSCI EM Value Index captures securities exhibiting overall value style characteristics across 24 EM countries. The MSCI EM Value Index and the MSCI EM Growth Index are being presented for informational purposes only.

The MSCI ACWI Value Index captures securities exhibiting overall value style characteristics across 23 DM countries and 24 EM countries. The MSCI ACWI Value Index and the MSCI ACWI Growth Index are being presented for informational purposes only.

The performance of the Indexes reflects dividends net of foreign tax withholdings applicable to a typical foreign investor and capital gains but does not reflect the deduction of any investment management fees or other expenses or taxes. The indexes are unmanaged and cannot be invested in directly.

Under no circumstances does the information contained within represent a recommendation to buy or sell securities. The securities identified in the materials are used for illustrative purposes in the discussion of our investment philosophy and processes. We may or may not have held, currently hold, or will hold any of the securities.

The portfolio(s) are actively managed and holdings are subject to change. We believe the information presented is reliable, but we do not guarantee its accuracy. The opinions expressed will evolve as future events unfold. The investment risk of the portfolio(s) may be increased by the portfolios' ability to invest in smaller company stocks, and IPOs. Investing in growth stocks involves certain risks, in part, because the value of securities is based upon future expectations that may or may not be met. Small company stocks are generally riskier than large company stocks due to greater volatility and less liquidity.
