Firm AUM

\$2.6 Billion

Portfolio Manager

Travis Prentice, CIO

Key Benefits

- Persistent exposure to momentum, a significant source of excess returns in global equity markets
- Strategic portfolio diversification through uncorrelated alpha to complement traditional value and quality style exposures
- A viable substitute for traditional growth exposure

Investment Process

Our Informed Momentum® approach combines momentum with stock selection rationale, tailored risk management, and efficient implementation to deliver alpha for our clients.

About IMC

IMC is solely focused on helping clients build better portfolios through our Informed Momentum® investment approach. This approach has been applied consistently across all strategies since the inception of the firm in 2007. The daily application of our systematic process is designed to deliver consistent and predictable results. Since our entire company works for a single objective, it only makes sense to align the name of our brand with exactly what we do every day.

We are the Informed Momentum Company.

INSTITUTIONAL INVESTOR USE ONLY. Past performance does not ensure future results, and there is no assurance that the portfolios will achieve their investment objectives.

Informed Momentum Company (the "Advisor") is an institutionally-focused investment advisor registered with the U.S. Securities and Exchange Commission under the Investment Advisers Act of 1940. The IMC US Micro Cap Composite contains all discretionary, equity only accounts that invest primarily in companies that correspond to the market values within the range of the Russell Microcap Growth Index. The IMC US Micro Cap Composite is expected to maintain an investment exposure of 95-100% with the goal of capital appreciation.

Gross and net returns are presented net of brokerage commissions and include the reinvestment of income from interest and dividends as well as capital gains. The returns do not reflect the deduction of taxes a typical investor may accrue or custodial fees. Net returns are net of the maximum annual management fee of 0.50%. Performance is calculated in US dollars.

The Russell Microcap Index consists of the smallest 1,000 companies in the small-cap Russell 2000 Index plus the next 1,000 securities. The Russell Microcap Growth Index (RMGI) measures the performance of those Russell Microcap companies with higher price-to-book ratios and higher forecasted growth values. The Russell Microcap Value Index measures the performance of those Russell Microcap companies with lower price-to-book ratios and lower forecasted growth values. The Russell Microcap Growth Index and the Russell Microcap Value Index are being presented for informational purposes only. As of September 1, 2025 the primary benchmark for the US Micro Cap strategy has been updated from the Russell Microcap Growth Index to the Russell Microcap Index to better align with the strategy's investment objectives and market exposure. Prior presentations of the strategy's performance, including those in pitchbooks distributed to prospective investors, utilized Russell Microcap Growth as the benchmark. The change in benchmark may result in different relative performance outcomes. The indexes are unmanaged and cannot be invested in directly.

FTSE Russell is the source of the Russell Index data and the owner of all trademarks and copyrights related thereto. Any further redistribution is prohibited. Russell is not responsible for the accuracy of this presentation and reserves the right at any time and without notice to change, amend or cease publication of the information.

Under no circumstances does the information contained within represent a recommendation to buy or sell securities. The securities identified in the materials are used for illustrative purposes in the discussion of our investment philosophy and processes. We may or may not have held, currently hold, or will hold any of the securities.

The portfolios are actively managed and holdings are subject to change. We believe the information presented is reliable, but we do not guarantee its accuracy. The opinions expressed will evolve as future events unfold. The investment risk of the portfolios may be increased by the portfolios' ability to invest in smaller company stocks, and IPOs. Investing in growth stocks involves certain risks, in part, because the value of securities is based upon future expectations that may or may not be met. Small company stocks are generally riskier than large company stocks due to greater volatility and less liquidity.
